SINGAPORE & BEIJING — September 10, 2026 — True Partner Technology Ltd. (TPT), a business unit of True Partner dedicated to Robotics products and services (www.truepartnertechnology.com), today announced a major strategic distribution and co-development partnership with AutoXing (www.autoxing.com), a pioneer in Autonomous Mobile Robot (AMR) solutions.

The alliance introduces a dedicated line of TPT-branded AMRs built on AutoXing's advanced robotics platform. Designed to address critical labour shortages and rising operational costs, the solutions target smart factories, logistics centres, hypermarket warehouses, and the hospitality sector across Europe and Asia-Pacific.

Addressing Global Labor Dynamics with Tailored Solutions

The joint initiative focuses heavily on Western Europe, prioritizing the **Benelux region (Belgium, the Netherlands, and Luxembourg)** as True Partner Technology's primary central European operational hub. Faced with escalating labour costs, strict local workforce protections, and chronic labour shortages, European industrial operators are increasingly turning to automated systems to handle repetitive, high-volume tasks. TPT's AMR lineup enables businesses to optimize workflow efficiency while elevating workforce safety and compliance.

Simultaneously, True Partner Technology is expanding its regional sales, distribution, and service network across Asia, with active hubs established in **Singapore, Malaysia, Indonesia, Thailand, and Hong Kong**.

Value-Added Engineering & Industry-Grade Data Security

Under this partnership, True Partner Technology offers full-value turnkey integration. Beyond hardware deployment, TPT provides complete system architecture, fleet management, local technical support, and strict **data security protections**—ensuring enterprise customer data, facility maps, and operational metrics remain secure and compliant with global privacy standards.

Executive Commentary

"Our partnership with AutoXing represents a pivotal step in True Partner Technology's global strategy. By combining AutoXing's hardware platforms with TPT's value-added integration, localized support, and rigid focus on data security, we offer enterprise clients a secure, scalable answer to persistent labour shortages. We are fully confident that TPT and AutoXing together will set a new standard for intelligence and automation across Benelux and Asia."

— Ralph van Put, CEO, True Partner Technology Ltd.

"Partnering with True Partner Technology opens immediate, high-value pathways into key global markets. TPT's strong regional footprint in Asia and focused expansion into Central Europe via Benelux make them the ideal strategic partner. Together, we are bridging the gap between cutting-edge AMR technology and practical, enterprise-grade deployment in manufacturing, logistics, and hospitality."

— Muhan Jing, CEO, AutoXing

About True Partner Technology Ltd.

True Partner Technology Ltd. (www.truepartnertechnology.com) is a dedicated robotics division under True Partner. TPT delivers end-to-end automation, Autonomous Mobile Robots (AMRs), and service robotics tailored for smart factories, logistics, facility management, and hospitality across Europe and Asia-Pacific.

About AutoXing

AutoXing (www.autoxing.com) is a leader in autonomous mobile robot technology, specializing in intelligent navigation, automated lifting platforms, and payload movement systems for industrial, commercial, and logistics applications worldwide.
