## True Partner Technology Launches Benelux and South-East Asia Autonomous Mobile Robots roll-out

True Partner  
Technology

Singapore - Today True Partner Technology, a company of the True Partner Group, announces the commercial roll-out of its autonomous mobile-robot sales operation across the Benelux region (Belgium, the Netherlands, Luxembourg) and key South-East Asian markets (Hong Kong, Singapore, Malaysia, Thailand, Indonesia, Philippines). The new service delivers high-performance robotics from established Chinese manufacturers combined with a locally based service layer that emphasizes data governance, regulatory compliance, and end-to-end consultancy.

### Key differentiators

**Data governance & local compliance** – All operational data, fleet performance metrics and optimisation insights are stored on a private cloud or on-premises infrastructure that resides within the customer’s jurisdiction. In Europe, data remains on European infrastructure under the customer’s control; in South-East Asia, data residency aligns with each country’s privacy regulations.

**Consultancy-driven deployment** – The offering includes a pre-deployment analysis, workflow mapping, and integration services that align robot capabilities with existing systems. The focus is on operational efficiency rather than pure technology, ensuring that robots adapt to the business rather than the business reshaping around the robots.

**Local support & partnership** – local service teams delivering technical support, deployment expertise, and continuous optimisation. This local presence guarantees adherence to regional regulations and operational standards.

### Availability

Our autonomous mobile-robot solutions are now available to enterprises and professional organisations seeking to enhance their operations in the listed South-East Asian markets. Benelux availability will start from July. Prospective customers can contact the regional sales teams for demonstrations, pilot programmes, and customised deployment plans.

### About True Partner Technology

True Partner Technology provides autonomous mobile-robot solutions that combine world-class Chinese hardware with a locally-sourced service layer. By prioritising data sovereignty, regulatory compliance, and operational consultancy, the company enables organisations across Europe and South-East Asia to realise real efficiency gains without complications.
